Acknowledgement

I would like to express my sincere gratitude to my respected Ma'am , **Dr. Vaidya Krishna**, for his valuable guidance, continuous support, and encouragement throughout the completion of this project on **Sip N' Bite**. His insights and suggestions played a significant role in shaping this work.

I am also thankful to **Sarvajanik College of Engineering and Technology** for providing me with the opportunity and the necessary resources to successfully carry out this project.

I would like to extend my appreciation to my friends and classmates for their cooperation, helpful discussions, and support during the development of this project.

Finally, I express my heartfelt thanks to my family for their constant motivation, encouragement, and understanding, which helped me complete this project successfully.

This project has been a valuable learning experience, and I am grateful to everyone who directly or indirectly contributed to its completion.

Chauhan Deep

Introduction

Sip N' Bite is a modern café management system developed using **Laravel and React Native.** The system is designed to digitalize and streamline café operations by integrating online table reservations, food ordering, and secure payment processing into a single platform.

In today's fast-paced environment, customers prefer quick and convenient services. This system addresses that need by allowing users to book tables in advance, explore the food menu, order food, and complete payments online through a use r-friendly mobile application. These features help reduce waiting time and enhance the overall customer experience. Additionally, it assists administrators in efficiently managing reservations, food orders, menu items, monitoring transactions, and maintaining organized café operations.

The project emphasizes usability, efficiency, and reliability, making it suitable for real-world café environments.

1.1 Proposed System and its Objectives

The proposed Sip N' Bite platform bridges the gap between customer convenience and back-office restaurant operations. It features a dual-interface architecture: a responsive Web Admin Portal for the restaurant owner/manager, and a modern Android Mobile Application engineered for diners.

Objectives:

- To develop a web-based platform and Android application for easy table reservation and ordering food.
- To implement secure and efficient online payment integration.
- To minimize manual errors and operational delays.
- To enhance customer convenience through digital services.
- To provide administrators with centralized control and monitoring.
- To maintain accurate and structured data for future analysis.

1.2 Core Components

The system is structured into the following core components:

- **Customer:**

  Enables users to register, log in, check table availability, make reservations, order food, and perform online payments through a simple and user-friendly interface.

- **Admin:**

  Provides functionalities for managing bookings, orders, customer information, payment records, and system updates through a centralized dashboard.

- **Reservation Management System:**

  Handles real-time table allocation, scheduling, booking confirmations, and availability tracking for efficient reservation management.

- **Payment Processing Module:**

  Ensures secure, reliable, and efficient handling of online transactions with payment confirmation and transaction status tracking.

- **Database Management System (MySQL):**

  Stores and manages all application data, including user profiles, booking details, order information, and transaction history.

1.3 Minimum and Maximum Software/Hardware Requirements

- **Software Requirements**
  - **Minimum Configuration:**

    - Operating System: Android 8.0 or later
    - React Native Framework
    - Expo SDK
    - JavaScript / TypeScript
    - Android Studio / Expo Go
    - Internet Connection

  - **Recommended Configuration:.**

    - Operating System: Android 12 or later
    - Latest Stable React Native Version
    - Latest Stable Expo SDK
    - Node.js (LTS Version)
    - Android Studio with Android SDK
    - EAS Build for Application Packaging
    - Internet Connection

- **Hardware Requirements**
  - **Minimum Configuration:**

    - RAM: 4 GB
    - Processor: Quad-core processor or equivalent
    - Storage: 500 MB free space
    - Device: Android smartphone
    - Internet: Wi-Fi or mobile data connection

  - **Recommended Configuration:**

    - RAM: 6 GB or higher
    - Processor: Octa-core processor or above
    - Storage: 2 GB or more free space
    - Device: Android smartphone with an updated OS
    - Internet: Stable Wi-Fi or 4G/5G connection

1.4 Advantages and Limitations of the Proposed System

Advantages

- Provides **convenient and time-saving online booking**
- Enables **secure digital payment transactions**
- Reduces dependency on manual processes
- Improves operational efficiency and service quality
- Offers real-time table availability and booking management
- Enhances customer satisfaction through a smooth user experience

---

Limitations

- Requires stable **internet connectivity** for operation
- Initial setup and maintenance efforts are required
- Security measures must be properly implemented to protect transactions
- Limited accessibility for users unfamiliar with digital systems

2. Requirement Determination & Analysis

2.1 Requirement Determination

Requirement determination is a crucial phase in system development, where the needs of users and system functionalities are clearly identified and analyzed. For the **Sip N' Bite** system, requirements are gathered based on the operational challenges faced in traditional café management and the growing demand for digital services.

- **Functional Requirements:**

⇒ The system should allow users to **register and log in securely**
⇒ Users must be able to **view available tables and book them in advance**
⇒ The system should support **online payment processing**
⇒ Admin should be able to **manage bookings, customers, and transactions**
⇒ The system should maintain **records of all reservations and payments**
⇒ Users should receive **confirmation of booking and payment**

- **Non-Functional Requirements:**

⇒ **Usability:** The interface should be simple and user-friendly
⇒ **Performance:** The system should respond quickly to user requests
⇒ **Security:** User data and transactions must be protected
⇒ **Reliability:** The system should function consistently without failure
⇒ **Scalability:** The system should handle increasing users efficiently

2.2 Targeted Users

- **TARGETED USERS**

The Sip N' Bite system is designed to serve different categories of users, each with specific roles and requirements:

1. Customers

• Individuals who want to book tables online
• Users who prefer cashless and quick payment options
• Customers seeking convenience and time-saving services

2. Café Administrator (Admin)

• Responsible for managing bookings and table availability
• Monitors customer details and transaction records
• Ensures smooth operation of the system
• Handles updates and maintenance of the platform

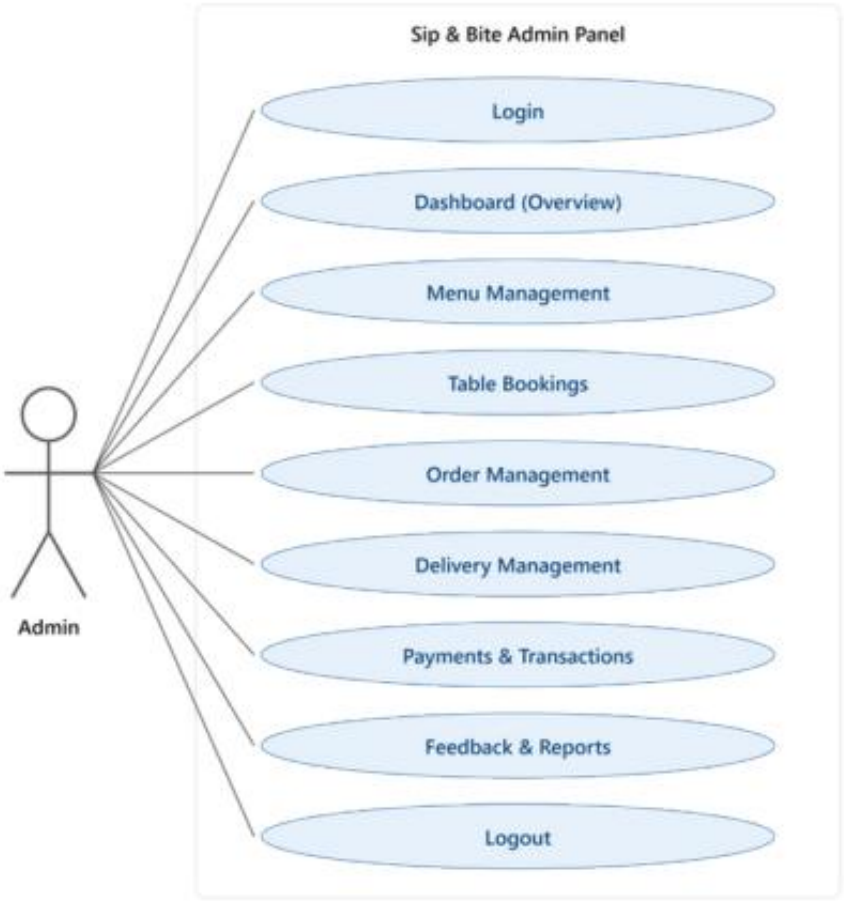

3. Delivery Partner

• Responsible for picking up and delivering customer orders
• Can view available delivery requests and accept orders
• Updates order status after successful delivery
• Maintains delivery history and tracks completed orders
• Ensures timely and efficient delivery service

3.5 Deployment Diagram

3.6 Data Dictionary

1. Customer

It Stores Registration And Authentication Details Of The Customers.

Field Name	Data Type	Constraints / Keys	Description & Purpose
Id	BIGINT UNSIGNED	PK, Auto Increment	Unique user identifier
name	VARCHAR(191)	NOT NULL	Full name of the user
email	VARCHAR(191)	NOT NULL, UNIQUE	User email address for authentication
phone	VARCHAR(191)	NULLABLE	Contact phone number
password	VARCHAR(191)	NOT NULL	Bcrypt hashed security password
role	ENUM('admin','customer','delivery')	DEFAULT 'customer'	Access control role
status	VARCHAR(50)	DEFAULT 'active'	Account status flag
created_at / updated_at	TIMESTAMP	NULLABLE	Audit timestamp records

2. Categories:

It Stores menu's categories with proper manner.

Field Name	Data Type	Constraints / Keys	Description & Purpose
id	BIGINT UNSIGNED	PK, Auto Increment	Unique category identifier
name	VARCHAR(191)	NOT NULL	Category display title (e.g. Pizza, Burgers)
slug	VARCHAR(191)	NOT NULL, UNIQUE	URL-friendly slug
image	VARCHAR(191)	NULLABLE	Relative image asset path
description	TEXT	NULLABLE	Summary description of category
status	TINYINT(1)	DEFAULT 1	Active availability toggle

3. Menu_items:

It used to store food details with name, price and image.

Field Name	Data Type	Constraints / Keys	Description & Purpose
id	BIGINT UNSIGNED	PK, Auto Increment	Unique food item identifier
category_id	BIGINT UNSIGNED	FK -> categories(id)	Associated food category
name	VARCHAR(191)	NOT NULL	Name of the dish
description	TEXT	NULLABLE	Ingredients and culinary summary
price	DECIMAL(10,2)	NOT NULL	Unit price in INR (₹)
image	VARCHAR(191)	NULLABLE	Image filename stored in public assets
is_available	TINYINT(1)	DEFAULT 1	Kitchen stock availability status
is_veg	TINYINT(1)	DEFAULT 1	Vegetarian (1) or Non-Vegetarian (0) badge
rating	DECIMAL(3,2)	DEFAULT 4.5	Aggregated customer rating score

4. Orders:

It used to store order recorders which placed by the users.

Field Name	Data Type	Constraints / Keys	Description & Purpose
id	BIGINT UNSIGNED	PK, Auto Increment	Unique order internal ID
order_number	VARCHAR(191)	NOT NULL, UNIQUE	Formatted business order ID (e.g. ORD-1042)
user_id	BIGINT UNSIGNED	FK -> users(id)	Customer placing the order
delivery_person_id	BIGINT UNSIGNED	FK -> delivery_persons(id), NULL	Assigned delivery rider
address_id	BIGINT UNSIGNED	FK -> addresses(id), NULL	Selected delivery location
subtotal	DECIMAL(10,2)	NOT NULL	Gross item cost before taxes
tax	DECIMAL(10,2)	NOT NULL	5% CGST/SGST tax total
delivery_fee	DECIMAL(10,2)	DEFAULT 40.00	Distance-based delivery surcharge
total_amount	DECIMAL(10,2)	NOT NULL	Net payable invoice sum
payment_method	VARCHAR(50)	NOT NULL	'cod' or 'razorpay'
payment_status	VARCHAR(50)	DEFAULT 'pending'	'pending', 'paid', or 'failed'
order_status	VARCHAR(50)	DEFAULT 'pending'	'pending', 'preparing', 'out_for_delivery', 'delivered'

5. Order_items:

It is used to store order items/food details which Is used place in order.

Field Name	Data Type	Constraints / Keys	Description & Purpose
id	BIGINT UNSIGNED	PK, Auto Increment	Unique line item identifier
order_id	BIGINT UNSIGNED	FK -> orders(id), ON DELETE CASCADE	Parent order reference
menu_item_id	BIGINT UNSIGNED	FK -> menu_items(id)	Referenced dish
item_name	VARCHAR(191)	NOT NULL	Snapshot of item name at time of order
price	DECIMAL(10,2)	NOT NULL	Snapshot unit price
quantity	INT	NOT NULL	Number of portions ordered
subtotal	DECIMAL(10,2)	NOT NULL	Line subtotal (price * quantity)

6. Table:

It is use to store table details.

Field Name	Data Type	Constraints / Keys	Description & Purpose
id	BIGINT UNSIGNED	PK, Auto Increment	Dining table identifier
table_number	VARCHAR(50)	NOT NULL, UNIQUE	Physical table label (e.g. Table #1)
capacity	INT	NOT NULL	Maximum seating capacity (e.g. 2, 4, 6, 8)
location_type	VARCHAR(100)	DEFAULT 'Indoor'	Indoor, Outdoor Patio, or Rooftop
status	VARCHAR(50)	DEFAULT 'available'	'available', 'reserved', 'maintenance'

7. Table_booking:

It used to stored booking of the table.

Field Name	Data Type	Constraints / Keys	Description & Purpose
id	BIGINT UNSIGNED	PK, Auto Increment	Dining table identifier
table_number	VARCHAR(50)	NOT NULL, UNIQUE	Physical table label (e.g. Table #1)
capacity	INT	NOT NULL	Maximum seating capacity (e.g. 2, 4, 6, 8)
location_type	VARCHAR(100)	DEFAULT 'Indoor'	Indoor, Outdoor Patio, or Rooftop
status	VARCHAR(50)	DEFAULT 'available'	'available', 'reserved', 'maintenance'

4. Agile Documentation

4.1. Agile Project Charter

Field	Details
Project Name	Sip N’ Bite
Project By	Chauhan Deep Patel Yash Viras Prathamesh
Project Type	Android & Web Based Application
Technology Used	React Native, PHP, Laravel, MySQL, Expo
Start Date	14/07/2026
End Date	*Empty*

4.2. Agile Roadmap / Schedule

1st Quarter	2nd Quarter
Understand the project idea of **Sip N Bite – Food Ordering, Table Booking & Delivery System**. Gather requirements for Admin And Customer modules. Finalize project scope, identify target users, and define core features like menu browsing, food ordering, online payment etc.. Implementation Of AI in both sides(android and Web.)	Design and structure the system and draw various diagrams such as: • Use Case Diagram (Admin and Customer) • Class Diagram • Activity Diagram • Interaction Diagram • Deployment Diagram Design database (menu, orders, users, payments) and prepare data dictionary for the system**.**
3rd Quarter	**4th Quarter**
Develop the system using Laravel framework and React Native. Implement front-end and back-end modules including: • Customer (registration, login, order food, payment) • Admin (manage menu, orders, users) • AI chatbot Perform validation testing on all pages and prepare documentation alongside development.	Implement additional features for better usability such as order tracking, notifications, and improved UI. Optimize system performance, fix bugs, and ensure proper analysis and smooth working of the system.

4.3. Agile Project Plan

Task Name	Responsible	Start Date	End Date	Days	Status
Sprint 1	Chauhan Deep, Patel Yash , Viras Prathamesh.	14/07/2026	21/07/2026	**7**	Complete

UI Improvement	Deep	29/09/2026	01/10/2026	3	Complete
Final Sprint	Chauhan Deep , Patel Yash , Viras Prathamesh	/ /2026	/ /2026		Complete
Documentation	Deep, Yash	/ /2026	/ /2026		Complete
Presentation Preparation	All	/ /2026	/ /2026		Complete
Final Submission	All	/ /2026	/ /2026		Complete

4.4. Agile User Story

Story Point	Story
1. Admin Management	As an Admin, I can manage menu items, categories, users, and orders so that the system remains organized and updated.
2. Order Management	As an Admin, I can view and manage all customer orders and assign them to delivery partners for smooth operation.
3. Customer Registration & Login	As a Customer, I can register and log in using my credentials so that I can access the food ordering system securely.
4. Food Ordering	As a Customer, I can browse menu items, add them to cart, and place orders with online payment for convenience.
5. Order Tracking	As a Customer, I can track my order status in real-time so that I know when my food will be delivered.
6. Delivery Management	As a Delivery Partner, I can view assigned orders and update delivery status so that orders are delivered efficiently.

4.5. Agile Release Plan

Sprint	Task Name	Responsible	Start Date	End Date	Days	Status	Release
1	Project Definition	All	14/07/2026	14/07/2026	1	Released	14/07/2026
1	Requirement Gathering	All	15/07/2026	17/07/2026	2	Released	17/07/2026
1	Project Scope	All	17/07/2026	17/07/2026	1	Released	17/07/2026
1	Core Components	All	17/07/2026	19/07/2026	2	Released	19/07/2026
1	Target Users	All	20/07/2026	21/07/2026	1	Released	21/07/2026

6. CONCLUSION

The Sip N' Bite system has been successfully designed and developed to provide an efficient and user-friendly platform for managing café services. The system simplifies the overall process of table booking, order management, and delivery handling by integrating the functionalities of customers, admin, and delivery partners into a single platform.

Through this project, users can easily browse services, place orders, make payments, and track their activities, while the admin can efficiently manage operations and maintain system records. The inclusion of delivery partner functionality further enhances the system by ensuring timely and organized order delivery.

This project has not only improved our understanding of software development concepts but also provided practical experience in designing real-world applications. It demonstrates how technology can be used to enhance convenience, reduce manual effort, and improve service quality.

In conclusion, the system fulfills its intended objectives and provides a strong foundation for future enhancements, making it a scalable and effective solution for modern café management.
